

**HYBRID-HIGH RELIABILITY  
DC-DC CONVERTER****28V Input, Triple Output****Description**

The ATR28XXT Series of DC-DC converters provide 30W of output power over the full military temperature range with no derating. These devices are pin compatible with the ATO series converters but offer twice the maximum output power in a lower profile package. A custom CMOS ASIC pulse width modulator operating at a nominal switching frequency of 550kHz combined with a unique magnetic feedback reduces circuit complexity for enhanced reliability. These converters provide 500V input to output isolation and operate in highly efficient single forward mode.

The advanced feedback design and high operating frequency provide an extremely wide bandwidth control loop with high gain and phase margin. This results in fast dynamic line and load response as well as superior audio rejection. The control loop is compensated to provide optimum performance over the full military temperature range and over the 16V to 40V input voltage range.

These converters are protected against both continuous output short circuits and output overload. Either load fault condition will result in operating in a low power dissipation fold back mode. The converters will shut down for approximately 15ms, then attempt to restart. This cycle will continue indefinitely unless the load fault is corrected. Recovery to normal operation is automatic upon removal of the load fault.

Manufactured in a facility fully qualified to MIL-PRF-38534, these converters are fabricated utilizing DLA Land and Maritime qualified processes. For available screening options, refer to device screening table in the data sheet. Variations in electrical, mechanical and screening specifications can be accommodated. Contact IR HiRel San Jose for special requirements.

**Features**

- 30W Output Power
- Flexible Output Loading
- -55°C to +125°C Operation
- Pin Compatible with ATO
- 0.410" Maximum Height
- 16V to 40VDC Input Range
- 500V Input to Output Isolation
- High Audio Rejection
- MIL-STD-704 Compatible
- Load Fault Protection - Short Circuit and Overload
- TTL level Compatible Synchronization
- Standard Microcircuit Drawings Available

## Specifications

Absolute Maximum Ratings		
Input voltage range	-0.5V <sub>DC</sub> to +50V <sub>DC</sub>	
Power Output	Internally limited, 37.5W typical	
Lead temperature	300°C	
Soldering temperature	300°C for 10second	
Temperature Range <sup>6</sup>	Operating case temperature	-55°C to +135°C
	Storage temperature	-65°C to +135°C

**Static Characteristics** T<sub>CASE</sub> = -55°C to +125°C, V<sub>IN</sub> = +28V ± 5 % unless otherwise specified.

Parameter	Symbol	Test Conditions -55°C ≤ T <sub>C</sub> ≤ +125°C, V <sub>IN</sub> = 28 V <sub>DC</sub> ± 5%, C <sub>L</sub> =0, unless otherwise specified	ATR2812T		ATR2815T		Unit

Device weight				65		65	g

### Notes to Specifications

1. Tested at each output.
2. Parameter guaranteed by line and load regulation tests.
3. Although operation with no load is permissible, light loading on the main (+5 volt) output may cause the output voltage of the auxiliary outputs ( $\pm 12$  volt or  $\pm 15$  volt) to drop out of regulation. It is therefore recommended that at least 100mA or 20 percent of the output power, whichever is greater, be taken from the main (+5 volt) output and at least 50mA ( or  $1\pm 2V$ : 1.2W,  $\pm 15V$ : 1.5W) of the output power is taken from the auxiliary ( $\pm 12V$  or  $\pm 15V$ )
4. Total combined output power 30 watts.
5. Bandwidth guaranteed by design. Tested for 20kHz to 2MHz.
6. An overload is that condition with a load in excess of the rated load but less than that necessary to trigger the overload protection circuit and is the condition of maximum power dissipation.
7. Load step transition time between  $2.0\mu\text{s}$  to  $10\mu\text{s}$
8. Recovery time is measured from the initiation of the transient to where  $V_{OUT}$  has returned to within  $\pm 1.0\%$  of  $V_{OUT}$  at 50% load.
9. Input step transition time between  $2.0\mu\text{s}$  to  $10\mu\text{s}$ .
10. Parameter shall be tested as part of design characterization and after design or process changes. Thereafter parameters shall be guaranteed to the limits specified in the table.
11. Turn on delay time measurement is for either a step application of power at the input or the removal of a ground signal from the inhibit pin (pin 8) while power is applied to the input.
