NOTES:

- ① Load and Line Regulation are specified at a constant junction temperature. Pulse testing with low duty cycle is used. Changes in output voltage due to heating effects must be taken into account separately.
- ② If not tested, shall be guaranteed to the specified limits.
- ③ Denotes the specifications which apply over the full operating temperature range.

Standard Application

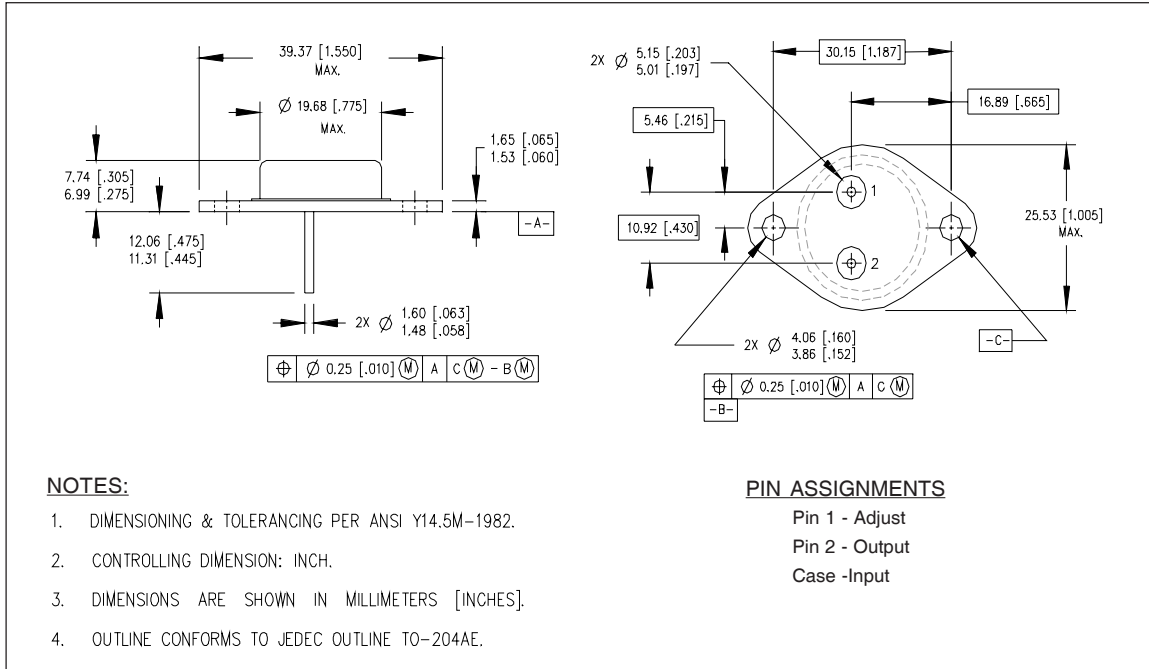

* C_{in} is required if regulator is located more than 4 inches from power supply filter. A $1.0\mu\text{F}$ solid tantalum or $10\mu\text{F}$ aluminum electrolytic is recommended.

** C_o is necessary for stability. A $1.0\mu\text{F}$ solid tantalum or $10\mu\text{F}$ aluminum electrolytic is recommended.

$$V_{OUT} = -1.25V (1 + R2/R1)$$
